

Comrex Technical Bulletin: Direct IP UI Web Access with LiveShot Firmware v1.5

Direct Web Access

With the release of LiveShot firmware version 1.5, software, control apps, and Flash are no longer needed to connect and control LiveShot codecs. Using the internal IP address of the unit while on the same LAN will allow the user to login directly using a web browser to control, configure and monitor statistics.

In The Field

This function also works for directly connecting to the internal LiveShot access point via WiFi. Connect your smart phone or laptop to the LiveShot's access point, and then point your browser to:

http://10.10.10.10 -or- http://comrex/

Remote Access via Switchboard

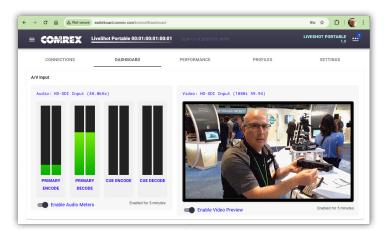

It's also possible to use Switchboard to view the user interface of any device in your fleet, rather than connecting directly to the LiveShot. This feature was previously available, but now no longer requires Flash support in the web browser. When you are logged into your Switchboard account in a browser, you'll see a button labeled "Open LiveShot Control."

Comrex Swit	chboard					Jack Burton (jburton)
Dashboard	LiveShots	Contact Lists	Sharing	Users	API	🕒 Sign Out
LiveSh	nots					⇒Switch to Audio Codec Mode
+ Add New Ur	it					Open LiveShot Control

Opening LiveShot Control requires you to re-login using your Switchboard credentials, then provides a list of all online LiveShots in your fleet.

Search Q 3 units are online.	CONTROL UNIT

You can then choose any unit and see the complete user interface via Switchboard. Note that the video preview and audio meter functions are disabled by default for this mode. You may temporarily enable each via the respective toggle switches shown below.
